NEDO human cDNA sequencing project supported by Ministry of

Economy, Trade and Industry of Japan; cDNA full insert sequencing:

Research Association for Biotechnology; cDNA library construction:

Institute of Medical Science, University of Tokyo, Laboratory of

Genome Structure, Human Genome Center; cDNA 5'- & 3'-end one pass

sequencing and clone selection: Helix Research Institute (supported

by Japan Key Technology Center etc.).

Description: 1st strand CONA was primed with an oligo (dT) primer [ATGTGGCCTTTTTTTTTTTTTTTT]; double-stranded cDNA was synthesized using specific 5' and 3' primers and amplified by PCR. The PCR product was digested with 5il and size selection was performed to exclude fragments <1.5kb.The Sfil-digested PCR product was cloned into distinct Draill sites of pME185-FL3. XNOI sites just outside the Draill sites can be used to isolate the cDNA insert. Libraries were constructed by Sugano et al. (University of Tokyo, Institute of Medical Science). Custom primer used for sequencing (5' end primer [CTGCTGCTGNAAAGCTGCG]; and primer [CTGACCTGNAAAAGCTGCG];
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  /tränslation="MKKTGVVFGASLFLLLSLTVFSIVSVTAYIALALLSVTISFRIY

This sequence is from the BBSRC/Dundes/Nortingham/Sanger/Sheffield/UMIST cDNA collection, Engage and Library constructed by Elizabeth Bosch. cDNA was prepared from RNA extracted from brain, and poly A-trimmed. EcoRI-NotI cut cDNA was then ligated into the vector. Vector: pBluescript II KS(+); Site_1: EcoRI; Site_2: NotI Host: Escherichia coli DH100.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          244

                                                                                                                                                                                                                                  BBSRC/Dundee/Nottingham/Sanger/Sheffield/UMIST cDNA collection, from a library constructed by Elizabeth Bosch. cDNA was prepared from RNA extracted from cerebrum, and poly A-trimmed. EcoRI-NotI cut cDNA was then ligated into the vector. Vector: pBluescript II KS(+); Site_1: EcoRI, Site_2: NotI Host: Escherichia coli DH10B. Location/Qualifiers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            21
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   41
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      61
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              81
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               LeuPheLeuLeuLeuSerLeuThrValPheSerIleValSerValThrAlaTyrIleAla

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes a binding molecule which binds to human NogoA polypeptide, human NiG, human NiG-D20 or human NogoA 623-640 with a dissociation constant of less than 1000nM. Also described: (1) a polymucleotide encoding the binding molecule; (2) an expression vector or system comprising the polymucleotide; (3) a host cell comprising the binding molecule or system comprising the expression system; (4) a pharmaceutical composition comprising the binding molecule and a carrier or diluent; and (5) treating diseases associated with nerve repair. The binding molecule has neuroprotective activity, and can be used in gene therapy. The binding molecule is useful in preparing a composition for treating central nervous system (CNS) injury or neurodegenerative disorders. The present sequence encodes rat NogoA, which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         140
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       160
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  100

The present sequence is a cDNA encoding rat Nogo A protein which is a potent neural call growth inhibitor and is free of all central nervous sequence was generated by fusing Rol8037-3, R1-3021 cDNA sequence was generated by fusing ROL8037-3, R1-3021 cDNA sequences isolated from hexanucleotides-primed rat brain stem/Spinal cord library, and Olise EDNA from an oligo d(T)-primed rat oligodendrocyte library, Nogo proteins and fragments displaying neurite growth inhibitory activity are used in the treatment of neoplastic disease of the CNS e.g. glioma, glioblastoma, medulloblastoma, craniopharymgioma, ependyoma, pinealoma, haemangioblastoma, accoustic neuroma, oligodendroglioma, pinealoma, neuroblastoma or retinoblastoma and degenerative nerve consequence or Alzheimer's and Parkinson's diseases. Therapeutics which promote Nogo activity can be used to treat or prevent hyperproliferative or benign dysproliferative disorders e.g. psoriasis and tissue consequence or inhibit production of Nogo protein to induce regeneration of neurons or inhibit promote neurite

Promoting nerve regeneration and preventing neuronal degeneration in the central/peripheral nervous system from injury/disease, comprises administering nervous system-specific activated T cells/antigen, or analogs/peptides.

Disclosure; Page 40-44; 93pp; English.

The invention relates to promoting nerve regeneration or conferring neuroprotection and preventing or inhibiting neuronal degeneration in the central peripheral nervous system (NS). The metchod involves administerring (NS-specific activated T cells, NS-specific antigen, its analogue or its peptide, a nucleotide sequence the NS-specific antigen or its analogue or combinations. The method is useful for promoting nerve regeneration and preventing neuronal degeneration in central/peripheral nervous system (C combinations. The method is useful for promoting neurons system certains trauma, hemorrhagic stroke, ischaemic stroke or damages caused by surgery such as tumour excision. The disease is not autoimmune disease, or neoplasm. The disease results in a degenerative control method in the matter or both. The disease is not autoimmune disease, results in a degenerative control method in either gray or white matter or both. The disease is disease, facial nerve (Bell's) palsy, glaucoma, Huntington's chorse, amyotrophic lateral sclerosis, non-arteritic optic neuropathy, and vitamin deficiency, intervertebral dise hermiation, prion diseases such as Creutzfeldt-Jakob disease, carpal tunnel syndrome, peripheral curropathies associated with various diseases, including but not limited to uremia, porphyria, hypoglycemia, Sjorgen Lasson syndrome, acute sensory neuropathy, chronic ataxic neuropathy, bilary cirrhosis, primary anyloidosis, obstructive lung diseases, acromegaly, malabsorption syndromes, polycythemia vera, immunoglobulin (Ig)A- and IgG gamma-compathies, complications of various dutys (e.g., metronidazole) and toxins (e.g., alcohol or organophosphates), Charcet-Marie-Tooth disease, pathies, complications of various dutys (e.g., metronidazole) and toxins celasgease, or lipoproteinemia. The present sequence represents a DNA cencelling and anylone. and Nogo-C), an example of NS-specific antigen

                                                                                                                                                                       Use of gene sequence that is down-regulated in response to streptozocin-induced diabetes, vector, host cell, animal, polypeptide and antibody, in screening of compounds for treating or diagnosing pain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    101 LysGluLeuArgArgLeuPheLeuValAspAspLeuValAspSerLeuLysPheAlaVal 120
                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a novel isolated gene sequence that is down-regulated in the spinal cord in response to streptozocin-induced diabetes, or comprising, hybridising or having at least 80% sequence identity to a sequence whose expression products are kinases, phosphatases, ion channel proteins, receptors, transporters, G-protein coupled receptor proteins, DNA-binding proteins, proteases or enzymes, given in the specification. A gene of the invention has analgesic activity, and may have a use in gene therapy. The gene sequences, vector, host cell, animal, polypeptide and antibody are useful for screening of compounds for diagnosing or treating pain. The kits are useful for simultaneous, separate or sequential detecting and/or quantifying downsululation of a gene sequence in the spinal cord of a mammal in response to streptozocin-induced diabetes. The compound or pharmaceutical composition is useful as a medicament for treating or diagnosing pain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SerGluGluLeuValGlnLysTyrSerAsnSerAlaLeuGlyHisValAsnSerThrIle 100

The present sequence is a cDNA encoding rat Nogo C protein which is a potent neural cell growth inhibitor and is free of all central nervous system (CNS) myelln material with which it is natively associated. Nogo proteins and fragments displaying neurite growth inhibitory activity are used in the treatment of neoplastic disease of the CNS e.g. glioma, glioblastoma, acoustic neuroma, craniopharyngioma, ependyoma, pinealoma, haemangioblastoma acoustic neuroma, oligodendrogloma, menagioma, chaemangioblastoma or retinoblastoma and degenerative nerve disease e.g. Alzheimer's and Parkinson's diseases. Therapeutics which promote Nogo activity can be used to treat or prevent hyperproliferative or benign Ribozymes or antisense Nogo nucleic acids can be used to inhibit production of Nogo protein to induce regeneration of neurons or to promote structural plasticity of the CNS in disorders where neurite growth, regeneration or maintenance are deficient or desired. The animal models can be used in disagnostic and screening methods for predisposition or prevent disorders and to screen for or test molecules which can treat or referred in claim 32 and SEQ ID NO: 29 in disolosure of the Process or the CNS in claim 2 and SEQ ID NO: 29 in disolosure of the content of process or the specification does not include sequences for the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  101
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  121

```

present invention describes a method for identifying an agent

```
treating a diabetic or pre-diabetic individual. The method comprises contacting an agent to a mixture comprising a polypeptide encoded by a nucleic acid that hybridises under stringent conditions to a nucleic acid conditions to a nucleic acid encoding any of the 23 fully defined amino acid sequences given in the specification, and selecting an agent that modulates the expression or activity of the polypeptide. Also described: (1) a method of treating a diabetic or pre-diabetic animal, comprising administering to the animal acid sequence of introducing an expression cassette into a cell, comprising introducing into the cell an expression cassette comprising a promoter operably linked to a polynuclectide encoding a polypeptide, where the polynuclectide hybridises under stringent conditions to a nucleic acid encoding the above amino acid sequences; and (3) a method of diagnosing in a sample from the individual the level of the above-mentioned polynuclectide encoding the above-mentioned polynuclectide encoding the polypeptide or the level of the above-mentioned polynuclectide from the compared to a level of the polypeptide or comprising enter a modulated level of the polypeptide or comprise in either a lean individual indicates that the individual is diabetic. The method is useful in diagnosing and treating diabetic or pre-diabetic. The method is useful in diagnosing and treating diabetic or pre-diabetic. The compared to a level of the method may also be contacted the metabolic diseases in human subjects. The method may also be contacted the metabolic diseases in human subjects. The method may also be contacted the metabolic diseases in human subjects or pre-diabetic.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to human MAGI protein, which is similar to neuroendocrine-specific protein. The MAGI protein can be expressed by standard recombinant methodology. The MAGI polypeptides, polynucleotides and antibodies are useful for treating diseases, including neuropathies, spinal injury, neuronal degeneration, neuromuscular disorders, psychiatric disorders and developmental disorders, cancer, stroke and inflammatory disorders. The polynucleotide is also useful for chromosome localization and for tissue expression studies. The present sequence represents a DNA encoding the human MAGI protein
                                                                                                                                                                                                                                                                         MAGI protein; neuroendocrine-specific protein; neuropathy; human; spinal injury; neuronal degeneration; neuromuscular disorder; cancer; psychiatric disorder; developmental disorder; inflammatory disorder; stroke; cytostatic; cerebroprotective; neuroprotective; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel polypeptides related to neuroendocrine-specific proteins and polynucleotides useful for diagnosis of various diseases and for treatment of cancer and neurological disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 3579 BP; 1074 A; 803 C; 812 G; 890 T; 0 U; 0 Other;
